Vossloh Group, Q1/2009

First-time disclosure of an absolute performance indicator

When submitting the interim report on the first quarter of 2009, Vossloh meets the newly applicable criteria of IFRS 8 by aligning the Group's external and internal segment reporting system and bases, thus again improving on depth and structure of external reports.

True to its strategy of value-focused growth, Vossloh primarily works toward earning a premium on top of the return (cost of capital) claimed by investors and lenders. This premium equals the difference between ROCE (return on capital employed) and WACC (weighted average cost of equity and debt) as a relative indicator and, when multiplied by average capital employed (CE), the value added (VA) in a period is an absolute indicator which Vossloh discloses in the analysis of its results of operations.

The value added is basically modeled on the EVA[®] concept but uses the above three parameters (ROCE, WACC, CE). The WACC which investors and lenders expect Vossloh and its business units to yield as return on the total equity and debt is currently 11 percent. The capital employed underlying the ROCE and VA formulae equals the period average and is adjusted in that the other current accruals, being non-interest, are deducted from working capital and hence also CE.

Analysis of value added (VA)

- ▶ Value added by Rail Infrastructure up 0.9%
- ▶ Vossloh Fastening Systems: VA surging 232.4%, mainly owing to steep EBIT trend;
Vossloh Switch Systems: VA down 111.7%, partly due to unfavorable sales mix and higher CE
- ▶ Value added by Motive Power&Components declining
- ▶ Vossloh Locomotives: VA down 50.0% in line with EBIT downturn and higher capital employed;
Vossloh Electrical Systems: VA up 7.3% thanks to reduced working capital
